

Linkage cart coupled to an 8 metre fertiliser rig

Linkage cart fitted with a gas tank

12 Metre Cultipacker at Mungindi QLD

14 Inch Cultipacker rings are standard on the Boss

## Linkage Cart

The Boss Linkage Cart allows any linkage toolbars to be used as drawn implements without the need for a linkage tractor. Fitted with heavy duty floatation tyres and up to 12 tonne lift capacity the linkage cart can be configured with walking wheels on 2 & 4 metre centres or on single tyres on 3 metre centres.

### Reasons why you should consider a Boss Linkage cart:

- Don't have a linkage tractor
- Don't have enough lift capacity in your linkage tractor
- Want to utilise your existing drawbar tractor
- Want more fertiliser carrying capacity in your broadacre country

The linkage cart can be fitted with a gas tank, air seeder or liquid tank to increase your fertiliser capacity and improve your productivity.

## Cultipacker

Boss Cultipackers are available in 8 or 12 row versions & can be rigid or folding depending on your requirements.

### Benefits of using a Boss Cultipacker include:

- Breakdown large clods in the field which promotes soil flow and therefore trash incorporation
- Reduces the amount of water required to pre-irrigate as the soil is a lot finer resulting in a more even moisture profile and better seed germination
- 3-Point linkage on both sides of the implement allows the machine to be pulled one way for aggressive clod busting and the other way for refining the soil before planting, or rolling the soil after planting
- Follows the contour of the soil in bed and hill configuration
- Heavy duty 80mm agricultural sealed self-aligning bearings used throughout the machine, with the cultipacker rings running on 11mm wall bore-casing
- Standard 14" heavy duty rings giving better soil refinement and more ground following ability
- Centre section packer to give complete coverage along the full length of the machine
